

Outstanding project exhibit
in the frame of the International conference

THE ROLE OF COMMUNICATIONS AS CRITICAL ENABLER FOR THE DEVELOPMENT OF SMART ENERGY SYSTEMS

c/o Chamber of Commerce - Lecco – Italy - 14-15 September 2015

The conference:

Developing the Smart Grid has become an urgent global priority, promising economic, environmental, and societal benefits. Communication is at the core of the Smart Grid vision as it empowers the future power grids with the capability of supporting two-way energy and information flow, isolating and restoring power outages more quickly, facilitating the integration of renewable energy sources into the grid and empowering the consumer with tools for optimizing their energy consumption. The ISGAN conference calls smart grids, smart energy, smart cities and communication actors and stakeholders to discuss about the policy, regulatory, legislative and technical challenges to be addressed to leverage the potential of communication as enabler of the implementation of smartness and flexibility in the energy system.

The exhibit:

In the frame of the conference, space will be available in the conference foyer for the exhibit of outstanding projects/initiatives and results. Projects will have the possibility to exhibit a maximum of two (2) roll-up banners (approximately 2m high x 0,85m wide); space will be available on a shared table to disseminate up to two (2) reports/leaflets. For the presentation of video material, the projects will have power supply, but the video equipment/computers etc. shall be made available directly by the projects.

Conference material:

The project logo will appear on the draft agendas used for promotional purposes ahead of the conference, on the printed conference programme as well as on the dedicated ISGAN conference webpage with a short description. Post-event communications will also highlight the projects.

Eligibility & selection process:

Outstanding projects (ongoing or recently finished) dealing with the communication for the development of smart energy system (or having an important part of their programme dedicated to all aspects of communication) are invited to demonstrate their achievements, results and products. Due to space restrictions, the selection of the projects eligible for showcasing in Lecco will be made by the joint Presidiums of ISGAN and GSGF.

Costs:

The projects selected for the exhibition will contribute to the organisation costs with a lump sum of 400,00 € (four hundreds Euros). Upon selection, the project coordinator shall contact local organising committee (Mrs. Francesca de Larderel – RSE – Francesca.delarderel@rse-web.it) for information about payment settlement.

Information:

Please contact the local organising committee (Mrs. Francesca de Larderel – RSE – Francesca.delarderel@rse-web.it) for information about exhibition organisation and conditions for participation. Phone +3902399254606
